

Amendments To The Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Canceled)

2. (Currently Amended) Tubular container with a tamper-proof device, in accordance with claim ~~1~~ 5, ~~characterised in that~~ wherein the ~~blind~~ solid projection (12) ~~that protrudes out from the inner wall (17) of the interior of the neck (9)~~ is at least partially provided with some longitudinal ledges (26).

3. (Currently Amended) Tubular container with a tamper-proof device, in accordance with claim ~~1~~ 5, ~~characterised in that~~ wherein the hollow insert (13) is slightly tapered in shape, both in its interior and exterior, and on the exterior it has a ~~trunco conical area~~ conical portion (21), below the spherical ~~end~~ area (25), ~~to which correspondingly fit~~ fits into the hole (24), ~~also trunco conical,~~ in the top surface (3) of the cap (2).

4. (Currently Amended) Tubular container with a tamper-proof device, in accordance with claim ~~1~~ 5, ~~characterised in that~~ wherein the annular ledge ~~(23) is made~~

ledges are provided on the ~~external~~ side of the inner skirt
(19) of the cap (2) to be engaged against said screw-threaded
neck (9).

5. (New) Tubular container with a tamper-proof device, with a tube (1) and a cap (2), the cap (2) being provided with a hole (24) in the centre of its outer top surface (5), wherein the tube (1) has a screw-threaded neck (9) on which a screw-threaded inner skirt (10) of the cap (2) is engaged, while in an interior of the screw-threaded neck (9) there is a horizontal wall (17) provided with holes (16) so that a product can pass from the inside of the tube (1) towards the hole (24) in the cap (2); wherein the cap (2) also has an outer skirt (19), the tubular container comprising:

a solid projection (12) fixed to and extending up from the wall (17);

a hollow insert (13) open at one end, comprising an annular outer ledge (20) by means of which the hollow insert (13) is seated on the wall (17), an internal cavity (22) to receive the solid projection (12) and an upper end finishing off in a spherical area (25) that protrudes through the hole (24) in the top surface (5) of the cap (2),

wherein the solid projection (12) has a diameter smaller than that of the internal cavity (22) of the hollow

insert (13) and a height which does not reach the outer top surface (5) of the cap;

at least one annular ledge (23) made on the inner side of the screw-threaded neck (9) against which the inner skirt (19) of the cap is engaged and adjusted,

a flexible tongue (15) made in the interior of the cap (2), which makes contact and flexes, during the turning of the cap (2), with a fixed ledge (14) made on the tube.
